Task and prompt
Question
Extract of 120 rows
Design notes and codebook
Prompt: column names, weight and design variables, answer format
Baselines: three protocols
Direct answering one number, no tools
Code generation a program reads the extract
Text-to-SQL one query, one number
Design-aware framework
1 Specification machine-checkable estimand
2 Constrained implementation must reference the weight
3 Recomputation gate
Scoring
Weighted reference estimate w the design-correct value
Unweighted value u without the weights
Score: a hit when $|\hat{y} - w| \leq \tau$, and the design-omission share $\delta = (\hat{y} - w)/(u - w)$
